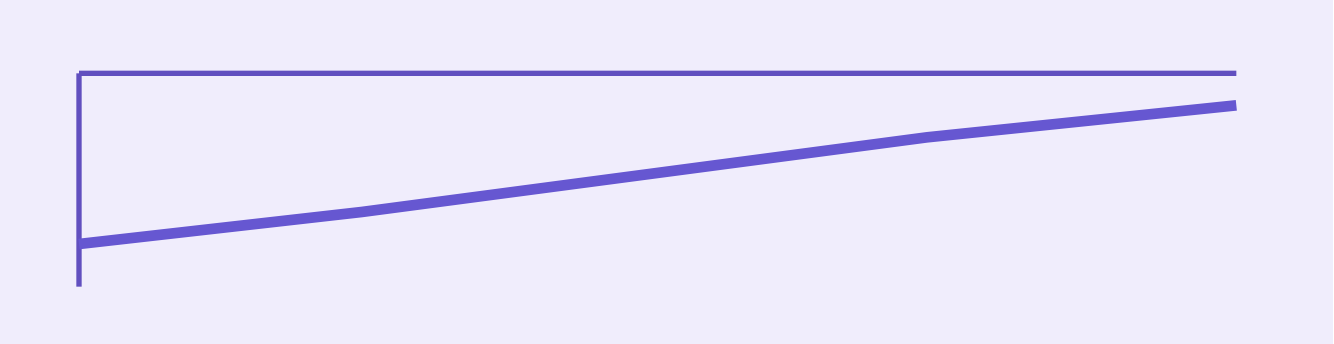
A small guide to reliable PDF reading.

This original document explains how careful readers compare a source page with a translation while keeping useful context.

A translation starts only after the reader asks for the current page. The chart below is part of the original PDF artwork.

```
function privateExample(value) {
  return value * 2;
}
```



Second page: lifecycle and cancellation.

Page two has its own sentences and its own translation state.
Changing pages must discard late answers for the previous page.

The source PDF remains available when the reading mode changes.
Choosing a new file also starts a fresh document session.
